

Press Release

ABC International and WeSky partner to deliver advanced in-seat power solution on Airbus A330.

The project provides next-generation USB-C and USB-A power to both Business and Economy Class cabins, supporting an improved passenger experience through a lightweight and efficient solution.

Naples, Italy - February 12, 2026 - ABC International has partnered with WeSky to integrate a new-generation in-seat power system on an Airbus A330 aircraft, marking an important step forward in passenger connectivity and cabin technology development.

As part of a comprehensive cabin modification programme approved under an EASA STC, ABC International selected WeSky's *Recharge™* 60W USB-C in-seat power system for installation on Airbus A330 MSN 1037. The upgrade covers both Business and Economy Class cabins, providing USB-C and USB-A power to all 305 passengers.

To support the integration of the new system, the aircraft's cabin electrical infrastructure was fully reworked by ABC International's engineering team. Existing cabling was completely removed, raceways were installed, and dedicated seat-level modifications were implemented to accommodate the new power architecture. Both Business and Economy Class seats were adapted to facilitate the installation of the new USB power outlets, ensuring full compatibility with the WeSky system.

WeSky supplied the full suite of system LRUs (Line Replacement Unit) together with customized wire-harness kits developed specifically for the aircraft configuration. In addition to hardware delivery, WeSky's engineering team supported ABC International throughout the integration phase, including equipment placement reviews, wire-harness configuration validation, and verification of each assembly prior to production. This close collaboration mitigated typical integration risks and contributed to a smooth installation process.

The *Recharge™* system features a lightweight architecture, offering reduced weight compared to conventional wide-body in-seat power solutions. Each outlet provides up to 60W USB-C power and supports the PPS protocol, ensuring compatibility with a wide range of passenger electronic devices.

ABC International's CEO, Rodolfo Baldascino, stated: "This programme reflects our approach to cabin modification projects, where technical integration, operational efficiency and collaboration with specialised partners are key elements. We would like to thank WeSky for their technical

support and close cooperation, which enabled the successful integration of the in-seat power system. Partnerships like this are essential to delivering reliable and well-coordinated solutions for aircraft operators.”

Commenting on the collaboration, Vytis Petrusevicius, Founder and CEO of WeSky, said: “We are proud to see our *Recharge™* system flying on another A330 and grateful to ABC International for trusting and selecting WeSky as their technology partner for this programme. Our mission is to deliver in-seat power systems that are lighter, smarter, and easier to install, and this project is a perfect example of that vision in action. We look forward to supporting more A330 operators together with ABC.”.

This project highlights the strength of the partnership between ABC International and WeSky, demonstrating their combined capability to deliver efficient and passenger-focused cabin technology solutions for wide-body aircraft operators.

About ABC International

ABC International is an EASA-DOA Company (EASA.21J.529) based in Naples, Italy. offering certification and modification services to the aviation industry players such as airlines, lessors, MROs and OEM's since 2009. In the last 2 years the company has delivered over 250 projects to major airlines, lessors in the field of aircraft cabin modification and upgrades. Thanks to its reliability, high professionalism and hard-work attitude, ABC International achieved successful results that represented a further motivation for ABC to grow in the right direction, looking at the future with innovation and industrial progress. For more information, please visit <https://www.abc-int.it/>

About WeSky

WeSky is an EASA Part 21J-approved Design Organisation (DOA) specializing in the in-house development and certification of next-generation 60W USB-C in-seat power systems for commercial aircraft under the Recharge™ brand. The Recharge™ system features an ultra-lightweight architecture, simple installation, and cutting-edge GaN-based power conversion technology. It is tailored for modern aircraft cabin environments and meets the latest airline and passenger requirements. For more information, please visit <https://www.wesky.aero/>
